Postdoctoral Associate in Somatic Mutation and Neurological Disease

A postdoctoral position is available with Jeffrey Kidd in the Department of Human Genetics. The position is focused on developing and implementing approaches to discover and characterize genomic mutations arising in somatic tissues, with a focus on neurodevelopmental and neurocognitive disorders. Ideal applicants would have experience with human genetics, high-throughput sequencing technologies, and the analysis and synthesis of disparate datasets. Successful candidates will thrive in an interdisciplinary environment of clinical researchers and basic scientists with a focus on human genetics, technology development, and informatics.

Qualifications:
The applicant should have a Ph.D. in genetics, molecular biology, or a related field, with experience leading genetics studies. Excellent written and oral communication skills are required, and informatics skills are a bonus.

Successful applicants will be part of a cutting-edge research program in genomics and human disease with ample opportunities for collaboration with researchers at the University of Michigan and around the world.

To apply, send a CV, cover letter describing your research experiences and ongoing research interests, and contact information for up to three references to Jeffrey Kidd at jmkidd@umich.edu
